Things I've Done

Backend Developer Intern, ClearPath Logistics -- 2023-01 to 2023-06

- Designed and built REST endpoints in Node/Express for a shipment tracking system serving internal ops teams.
- Set up MongoDB collections and wrote aggregation pipelines for the daily ops report.
- Deployed the service on AWS EC2 and configured basic Nginx reverse proxy.
- Used Git and GitHub for all version control; opened PRs for every change and achieved zero rollback incidents across the internship.

Education

B.E. Information Technology, Osmania University -- 2020-2024

Skills

Node.js, Express, MongoDB, AWS (EC2, S3), Git, GitHub, Linux basics, REST APIs, Postman.

(All UI work I've done so far has been plain HTML/CSS/vanilla JS -- have not shipped anything with a component framework like React or Vue yet.)
